

Condor Intel

Capture, maintain, enhance, access, analyse and report on valuable intelligence over time

Condor Intel is a purpose-built intelligence case management solution, providing a specialist, comprehensive system to manage intelligence entities, products and projects.

IRAP assessed at the Protected level, with powerful functionality out-of-the-box, Condor Intel requires relatively minimal configuration to tailor it to an organisation's specific business processes, work management rules and template and product requirements.

1. Entity centric

Build up intelligence profiles over time for entities including people, locations, references, vehicles, events and items and maintain a full history of all information received and produced relating to an entity.

2. Visualise intelligence networks

Seamlessly process and add value to incoming information by automatically creating intelligence relationships as a normal part of the assessment and investigative process. Retain valuable intelligence relationships captured over time and easily visualise networks with chart and tree-based views.

3. Optimise efficiency through effective automation

Manage your information effectively with out of the box configurations for intelligence ingestion, reporting, documentation, reviews and dissemination. Configure workflows to suit your own processes, and allow your team to focus on the work without getting lost in process management and administration. Integration with MS Word allows for seamless intel product creation with bespoke templates, user-friendly editing and formatting, and stream-lined product dissemination.

4. Visibility

Spend less time managing information and more time using it. Inform strategy, enable faster analysis and identify key areas of interest for further investigation, with rich, intuitive intelligence maps that can be easily interrogated to access deeper insights.

5. Configurable to your needs

Whilst providing comprehensive intelligence case management capabilities out-of-the-box, Condor Intel also enables organisations to tailor it to their needs, with configurable case types, categories, and reference datasets, plus the ability to add customer defined fields and inline forms for extended data capture requirements.

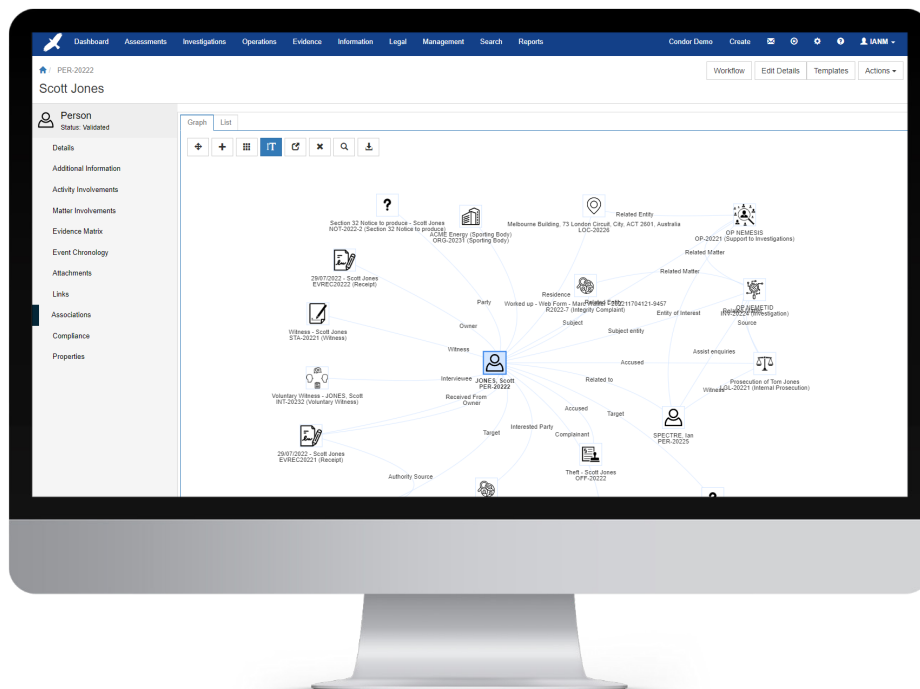

6. Standalone or integrated

Condor Intel has been designed as a standalone intelligence management platform, or to integrate with the wider Condor suite, to provide entity-based intel management capability to broader investigative case management requirements.

Intelligence entity management

- ✓ Build rich information profiles connecting entities of interest (people, organisations, property, location, or vehicles), with information about the entity and their relationships. Enhance records over time with new information to provide rich historical data.
- ✓ Explore an entity's associations via a visual link chart or tree views mapping relationships between entities of all types.
- ✓ Capture configurable categorised intelligence notes. Add and manage links between entities and matters/cases.
- ✓ Upload attachments and files to each entity, with support for all file types and sizes, ensuring all intelligence is linked to the entity of interest, and easily accessible in a secure environment.

Intelligence product management

- ✓ Save valuable time and resources with customisable templates for all intelligence products. Integrated with MS Word, gain the flexibility to automatically populate key details easily, then edit and format as required.
- ✓ Automate production of intelligence reports, with configurable parameters and inclusions.
- ✓ Manage reviews, quality assurance and approvals for all products with automated workflows, configured to match your own team structures and processes.
- ✓ Maintain dissemination lists for different audiences, securely publish and disseminate products, and track and manage the entire process with a complete audit trail.

Intelligence project management

- ✓ Ability to create and manage simple or complex projects, with scope across multiple entities, themes, cases, or products.
- ✓ Track and manage people, tasking and resource allocation, workflows and processes with clear accountability and oversight for the whole team.
- ✓ Easily administer and monitor inter-agency requests, with automated reminder and follow-up notifications.
- ✓ Produce complex, multi-sectional intelligence products, reports, or outcome documents with the unique model-based Condor Document Builder, providing users ability to automate document generation while maintaining complete control and flexibility over the final product.
- ✓ Manage reviews, quality assurance and approvals for all products with automated workflows, configured to match team and organisational processes.

Industry experts on your team

With over 100 years of industry experience, our team has a thorough understanding of end-to-end investigative and intelligence management processes, paired with world-class IT security knowledge. We have developed and refined a proven agile approach to designing and implementing solutions that meet your organisation's specific investigation and intelligence case management requirements.

We also know that providing the solution is just the first step in the journey. Not only do we offer an end-to-end software solution, but we also offer end-to-end customer service, ongoing support and enhancements as your environment and requirements evolve. Our clients are our top priority, and our ability to continue delivering value and impress is reflected in our many long-term partnerships with our clients, many spanning well over a decade.
